

Destacker for the Seafood Industry - As new - Fully overhauled

type: LETS overhaul

LETS Destacker for the Seafood Industry - as new - fully overhauled

- Reduction in personnel costs
- Hygienic Design
- Prevents cross-contamination
- Allows for a union approved, responsible operation

A Destacker specifically build for the Seafood Industry, for the destacking of seafood crates.

The unit destacks without vertical movement of the stack.

This allows for a faster moving operation. The crates are taken from the top down and if necessary denested.

After which they are vertically transported down and turned over in a parallel section. Due to the simplicity of the unit it is very reliable and suitable for industrial use.

The unit has a capacity of 350 to 500 crates per hour, depending on the arrangement of the crates (lose or stacked). The maximum stack height is 2 meters. Suitable for crates that adhere to the following measurement: 800x450 mm. It is possible to modify the unit for crates with a deviating measurement.

A walkway is present, surrounding the unit, to enable service and maintenance.
